The Archgard Wood Stove Line

- The top of each stove is made of heavyweight 5/16" plate steel that provides a large surface area and superb heat transfer. This unique design feature is so effective that it is easy to heat up a steamer, or pots and pans for cooking.
- Both models are available with either a robust pedestal base & ash pan or with a skirt, ash pan and decorative cast iron legs available in black, 24k gold plated and brushed nickel.
- A large cast iron door with ceramic glass is set on solid hinge blocks and operated with a smooth roller bearing door handles to provide durable trouble free operation.
- A large cast iron door with ceramic glass is set on solid hinge blocks and operated with a smooth roller bearing door handles to provide durable trouble free operation.
- Both models come standard with a brick lined firebox, lightweight ceramic baffles positioned above stainless steel secondary combustion tubes.
- Both models feature the latest in clean, non catalytic burn technology and a powerful air wash system that cleans the glass, allowing the flames to shine brightly through.
- A single lever combustion air control is so effective that it allows the stove to burn through the night, maintaining a constant and comfortable temperature. The resulting efficient wood consumption rate results in lower emissions and improved outdoor air quality.
- Heat circulating sides and back panels provide greater air flow for natural heating of the room and allow for a closer clearance between the stove and combustibles in the area.
- The optional quiet heavy duty variable speed 150 cfm distribution fan is so effective that it can heat an entire home on its own.
